INTRODUCTION

The Project focuses on analyzing A Dataset of Hotel Aggregator Listing using Power BI, By uncovering trends and patterns within the hospitality Industry.

We aim to enhance the competitiveness and quality of listing. Through Geographical Insights, Pricing analysis, Host Performance metrics, and property type Analysis, Our Goal is to optimize business strategies and improve guest experiences.

DESCRIPTION OF DATASET

1. id: Unique identifier for each listing.
2. listing_url: URL of the listing on the hotel aggregator platform.
3. scrape_id: Identifier for the data scraping event.
4. last_scraped: Date of the last data scrape.
5. source: Source of the listing information.
6. name: Name of the listing.
7. description: Description of the listing.
8. neighborhood_overview: Overview of the neighborhood where the listing is located.
9. picture_url: URL of the listing's picture.
10. host_id: Unique identifier for the host.
11. ... and many more columns capturing details about hosts, location, property type, room details, amenities, pricing, availability, reviews, and other relevant information.

PROJECT OBJECTIVES

1. Geographical
Insights

2. Pricing and
Availability
Analysis

3. Host
Performance

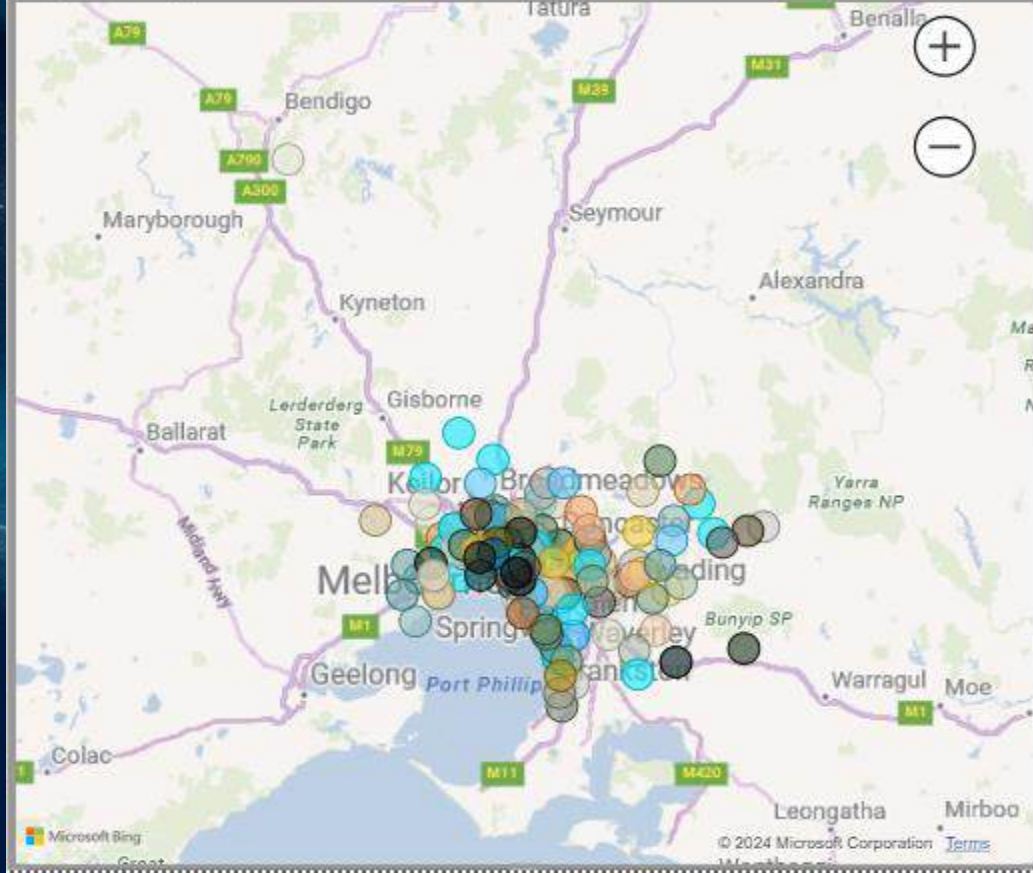

5. Property Type
and Room
Analysis

4. Review Scores
and Guest
Satisfaction

1. Geographical Insights

Popular neighbourhood

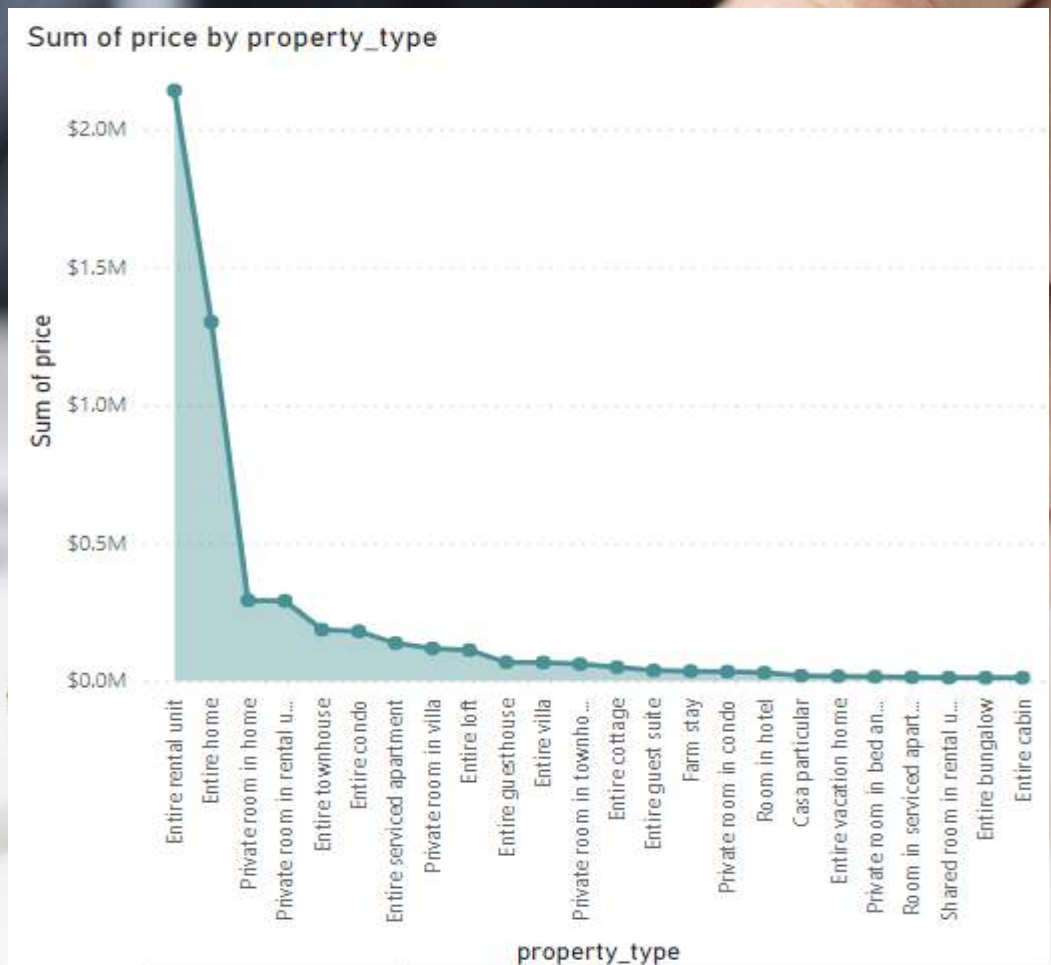

Sum of host_total_listings_count by host_location

2. Pricing and Availability Analysis

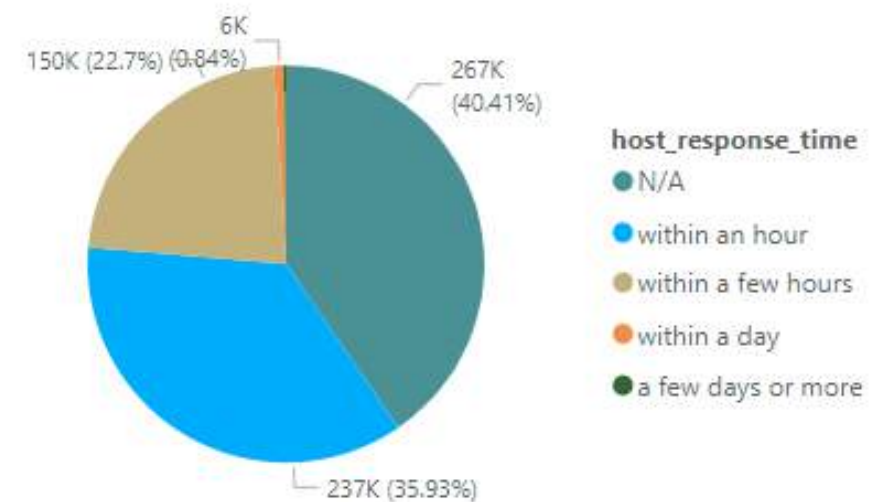

Average of price by accommodates

3. Host Performance

Sum of host_id	host_response_time	Count of host_is_superhost	Count of host_listings_count	host_verifications
225540076		2		None
3977602179	a few days or more	42	42	['email', 'phone', 'work_email']

3727379101382		23185	23183	

Sum of host_listings_count by host_response_time

4. Review Scores and Guest Satisfaction

Sum of host_listings_count by review_scores_value

Count of host_listings_count by review_scores_rating

Sum of host_listings_count by Year

Sum of review_scores_rating by property_type and room_type

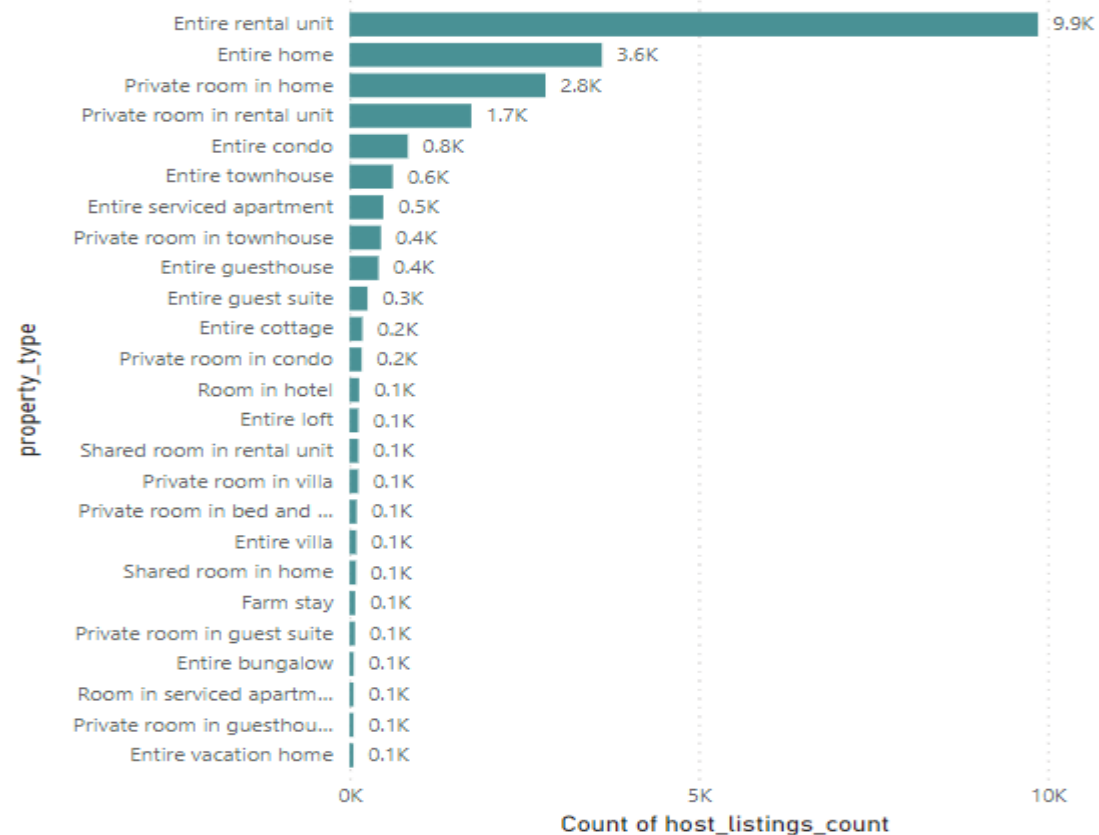

5. Property Type and Room Analysis

Count of host_listings_count by room_type

Count of host_listings_count by property_type

CONCLUSION

- ❖ Melbourne, Australia the highest number of listings.
- ❖ Guest Satisfaction is influenced by several factors, including cleanliness, amenities, communication, and overall experience.
- ❖ There exists a strong and evident proportional relationship between the total count of reviews and the total number of listings. This correlation provides hosts with more opportunities for ratings, thereby increasing their popularity.
- ❖ There is clear proportional relationship between count of total reviews and total listing counts.

The image is a collage. The top half features a group of five people (three women and two men) sitting around a table in a meeting, with their hands raised as if in discussion. The bottom half shows a modern building with a glass and wood facade. A large, semi-transparent olive-green rectangle covers the center of the image, containing the text 'Thank you' in white. The background images are slightly faded and layered.

Thank you
